Election/Restrictions

Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claim(s) 1-4, drawn to a polyester-based thermoplastic elastomer.

Group II, claim(s) 6-11, drawn to an inorganic-organic composite polymer.

Group III, claim(s) 20-23, drawn to a dyeing composition.

Group IV, claim(s) 5, 12-19 and 24-26, drawn to an optical element.

The inventions listed as Groups I, II, and III do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons: The invention defined by Group I is a polyester TPE that in no way resembles the composite polymer of Group II. Indeed, the material that comprises the invention of Group I is not employed in formulating the composite polymer of Group II. Likewise, the dyeing composition of group III contains neither the polyester TPE of Group I nor either the organosilane or metal oxides that make up the composite polymer of Group II.

Additionally, according to PCT practice, a group of inventions is considered linked to form a single general inventive concept only where there is a technical relationship among them that involves at least one common special technical feature wherein "special technical feature" refers to an aspect that represents the contribution

Art Unit: 1712

that each claimed invention makes over the prior art (See MPEP 1893.03 (d)).

Therefore, in those instances where the shared aspect is known, i.e. where a special technical feature is lacking, it is appropriate to make an assertion that unity is lacking. Applicant's disclosure would seem to indicate that the polyester thermoplastic elastomer is supposed to be the special technical feature yet these materials are already well known in the art. In fact, it is well established that these materials may be employed to facilitate bonding between various materials. See, for instance, U.S. Patent # 5,234,986 and JP 62-39680, which have been supplied as evidence of the documented use of this class of materials.

Because there is no special technical feature shared by the inventions defined by Groups I and III, they are not linked hence an election of Group I will result in the exclusion of Group III from consideration. On the other hand, the absence of a shared special technical feature in groups II and IV and Groups III and IV has not been ascertained. Accordingly, an election of either of Groups II or III would permit Applicant to also gain consideration of the invention defined as Group IV inasmuch as Groups II and IV and Groups III and IV are linked by a general inventive concept.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim

Art Unit: 1712

remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
